Visiting the Eye Services

Bedfordshire Children's Eye Services

The Community Eye Service

The Community Eye Service cares for children from 0 - 16 years of age with squints, lazy eyes and vision defects. To develop good eyesight it is important that eye problems are identified and treated at an early age, as defects which may cause squints often run in families.

Following referral we will offer you an initial assessment and together we will plan your child's treatment. Your treatment plan will then be reviewed regularly to improve your child's eyes as much as possible.

At your first visit the orthoptist may recommend an eye test for your child. Eye drops may be needed to enlarge the pupils. They can then check each eye is healthy and test to see if your child needs glasses. If glasses are needed, the children's voucher (HESP) will be issued.

For children referred in by the orthoptic support worker following a vision test in reception class at school, we offer some one stop clinics. These are clinics where the child will see an orthoptist first who will assess the child's eyes, then drops will be instilled and the child will be seen by our community optometrist. These appointments will take up to two hours.

What is an Orthoptist?

The orthoptist specialises in testing children's eyes, diagnosing squints, eye movement problems and visual problems, as well as monitoring, advising and managing treatment. The orthoptist works closely with the Ophthalmologist.

What is an Optometrist?

The optometrist's in the Children's Eye Clinic are specially trained to assess the need for glasses in young children. They also check the health of the eyes.

What does the Ophthalmologist do?

Your child may see either a community or consultant eye doctor. He/she will examine the eyes to ensure they are healthy and prescribe glasses, if required, to correct long/short sight or astigmatism. The ophthalmologist may refer your child to Moorfields at Bedford Hospital Eye Clinic or Luton and Dunstable NHS Foundation Trust Hospital Eye Clinic if specialist tests or surgery are recommended.

Childhood squints and lazy eyes

These require regular assessment and sometimes frequent treatment up to the age of eight years. Vision can fluctuate before this age and patching treatment may be required to improve your child's eyesight.

Vision Therapy

If your child has been referred for Vision Therapy, they will be seen at The Enhanced Service Centre or Wigmore Lane Health Centre only.

Follow up treatment may include:

Any, or some, of the following:

- observing the levels of vision;
- the wearing of glasses;
- patching the good eye to improve the vision in the lazy eye;
- eye exercises;
- surgery to make the squint less noticeable;
- monitoring the squint and the eye movements.

The orthoptist will assess your child's eyes regularly and suggest any necessary treatment.

Treatment will continue until:

- you are discharged by the orthoptist/ ophthalmologist
- you no longer want treatment;
- you have failed to attend one or two appointments without consulting the clinic and have therefore been discharged.

Your family doctor, health visitor and school nurse will be kept informed of your child's eye condition.

If you have any questions regarding the treatment of your child's eye condition, please discuss them with the orthoptist.

If you are unable to attend, please let us know as you will not be sent a further appointment.

Please let us know if you move or change your family doctor.
